PROFILE

Full stack software engineer with 4+ years of experience building scalable web applications from front to back. Skilled in React, TypeScript, and Node.js, with a strong focus on developer experience, performance, and clean architecture. Proven track record of delivering impactful features, mentoring teammates, and contributing to both early-stage and growing product teams.

WORK EXPERIENCE

FULL STACK SOFTWARE ENGINEER

UpLift Inc.

February 2022 - Present

- Accelerated product development during early-stage growth by contributing to a mental health platform using React + Flask
- Improved onboarding completion rates by building responsive client, student, and provider-first-use flows using XState
- Increased cross-team alignment by collaborating with product and design teams on core features like dynamic clinical notes
- Raised code quality and supported team growth by mentoring engineers, giving code reviews, and interviewing candidates
- Improved virtual care by independently implementing AWS address autocomplete & Zoom SDK integrations across the stack
- Enhanced developer experience and app stability by building 30+ reusable components with a focus on scalability and type-safety

FULL STACK SOFTWARE ENGINEER

Astro Vinyl Art

August 2019 - 2022

- Drove 150% YoY ARR by building a logistics platform that unified event scheduling & inventory workflows using React + Node.js
- Doubled development output by hiring & mentoring an engineer to own core features and uphold code quality with code reviews
- Tracked 100k+ sales and inventory updates with a mobile-friendly POS system backed by a Node.js API integrated with Shopify
- Improved analytics performance by 600% by optimizing MongoDB queries for faster data retrieval
