Full-stack Engineer with 5+ years of experience owning complex product systems end-to-end, spanning healthcare compliance, real-time scheduling, analytics, and revenue-driving platforms

Work Experience

Software Engineer II, BetterHelp – SF Remote

Apr 2025 – Jan 2026

- Drove technical knowledge transfer as an early UpLift engineer during its \$45M acquisition by BetterHelp, implementing insurance infrastructure that expanded the platform beyond self-pay
- Architected and built billable Intake and Progress Notes using Next.js and TypeScript, introducing structured data, AI-assisted narratives, and safety workflows to improve audit compliance
- Built a real-time scheduling experience allowing clients to book sessions with therapists or psychiatrists based on team availability, featuring live calendar slots and dashboard notifications
- Delivered UTM-driven onboarding attribution with Python, Flask, and PostgreSQL, enabling reliable conversion and step-level drop-off analysis for marketing teams

Software Engineer, UpLift – NYC Remote

Feb 2022 – Apr 2025

- Developed a multi-step onboarding and matching flow using React, TypeScript, and XState, improving care triage and addressing 53% drop-off in the highest-impact funnel stage
- Built a provider onboarding and profile lifecycle experience with editable forms, submission states, and admin review feedback, supporting iterative updates and approval-driven publishing
- Implemented a responsive insurance management flow for primary and secondary coverage, enforcing strict business rules across commercial, Medicare, and Medicaid plans
- Architected a Zoom SDK live session experience replacing Twilio, including a therapist-facing video layout with in-session sidebar tools for notes, client data, and workflow efficiency
- Empowered other devs on the team through leadership by interviewing candidates, mentoring junior engineers, engaging in code reviews, and setting standards for codebase best practices

Lead Engineer, Astro Vinyl Art – Pottstown, PA

Aug 2019 – Feb 2022

- Designed and built a logistics web application unifying event scheduling, inventory, warehouse picking, and sales workflows, driving 150% YoY ARR growth using React, TypeScript, Node.js
- Scaled engineering output by hiring and mentoring an engineer to own core features, enforce code quality, and lead code reviews
- Built a mobile-friendly POS system backed by a Node.js, Express, and TypeScript API, tracking 300k+ sales and inventory updates and integrating seamlessly with the Shopify API
- Improved analytics performance by 600% by optimizing MongoDB queries and data access patterns for high-volume reporting on custom MUI chart components
- Established CI/CD pipelines with GitHub Actions, set up staging environments, led cross-functional development in Jira, and integrated AWS, Google APIs, Cloudinary, and Firebase

Skills

Languages & Frameworks	TypeScript, JavaScript, React, Next.js, Node.js, Express, Python, Flask
Databases & APIs	PostgreSQL, MongoDB, Prisma, SQLAlchemy, REST, GraphQL, Redis
Infrastructure & Tooling	AWS, Docker, Git, GitHub Actions, CI/CD, Nginx, TurboRepo, Claude AI
UI & Styling	HTML, CSS, Tailwind, MUI, SCSS, ES6
Integrations	Stripe, Google APIs, Zoom, Twilio, Shopify, OpenAI

Projects

- AI Automation Education: Grew a YouTube channel teaching AI and no-code automation (n8n, LLM workflows), reaching thousands of learners through hands-on tutorials and real-world use cases
- Cyan Stack — Independent Software Consulting: Built custom full-stack software and automation solutions for clients, handling architecture, integrations, distributed systems, and deployment
